

Press Release

ADDITION OF GRAPHITIC FRICTION PAPER FOR POWERSHIFT TRANSMISSIONS, PTO CLUTCHES AND FORWARDS-REVERSE CLUTCHES TO FMC MATERIAL RANGE

Leighton Buzzard, UK – 2nd November 2017. FMC a world leader in the supply of friction and steel discs for heavy duty applications today announced the addition of the Friction Material P501 to their range.

P501 is a non-asbestos cellulose fibre friction material reinforced with a high volume of Graphite. This is a high strength material providing a very stable coefficient of friction and good thermal conductivity.

FMC have developed this advanced friction material to meet the markets ever increasing demands for high NVH performance under ever increasing loads where other materials have failed.

See data sheet for more detail.

About FMC

FMC was established in the UK in 1991 with a specific goal to supply products to the equipment manufacturers in the earthmoving and mining equipment industry. The company specialises in the field of wet friction materials and its products, which include sintered metallic, advanced friction paper, carbon, molybdenum, graphite and steel counter plates are used in a wide variety of heavy duty transmissions, clutch, differential and brake applications.

FMC's strategy is to continually strive to understand the changing needs of its markets by researching, developing and ultimately introducing new friction materials to meet the ever growing demand from its customers. This includes constant dynamometer testing of new friction material qualities, investments in the latest technology and working with clients in developing bespoke vehicle and machinery solutions.
